The background of the slide is an abstract composition of diagonal lines and a grid pattern. The lines are in shades of gray and white, creating a textured, almost woven appearance. The grid pattern is also composed of these lines, forming a series of small squares that are slightly offset from each other, giving a sense of depth and movement.

Eclipse Performance

Chris Laffra

Rational Performance Engineering Team

Introduction

“Considering the current sad state of our computer programs, software development is clearly still a black art, and cannot yet be called an engineering discipline.”

-- Bill Clinton

The Problem

Too Slow...

Too Big...

“Wirth's Law: Software gets slower
faster than hardware gets faster.” --
Nicklaus Wirth

“What Andy giveth’, Bill
taketh’ away”

“What Bill gives,
Gossling, Bray &
Gamma take away”

“ The nice thing
about standards
is that there are
so many of them
to choose from.”

-- Andrew S. Tanenbaum

“I invented the term Object-Oriented, and I can tell you I did not have C++ in mind.”

-- Alan Kay

“I have found that humans
often use
Smalltalk
during
awkward
moments.”

-- Data

“Java: the elegant
simplicity of C++
and the blazing
speed of
Smalltalk.”

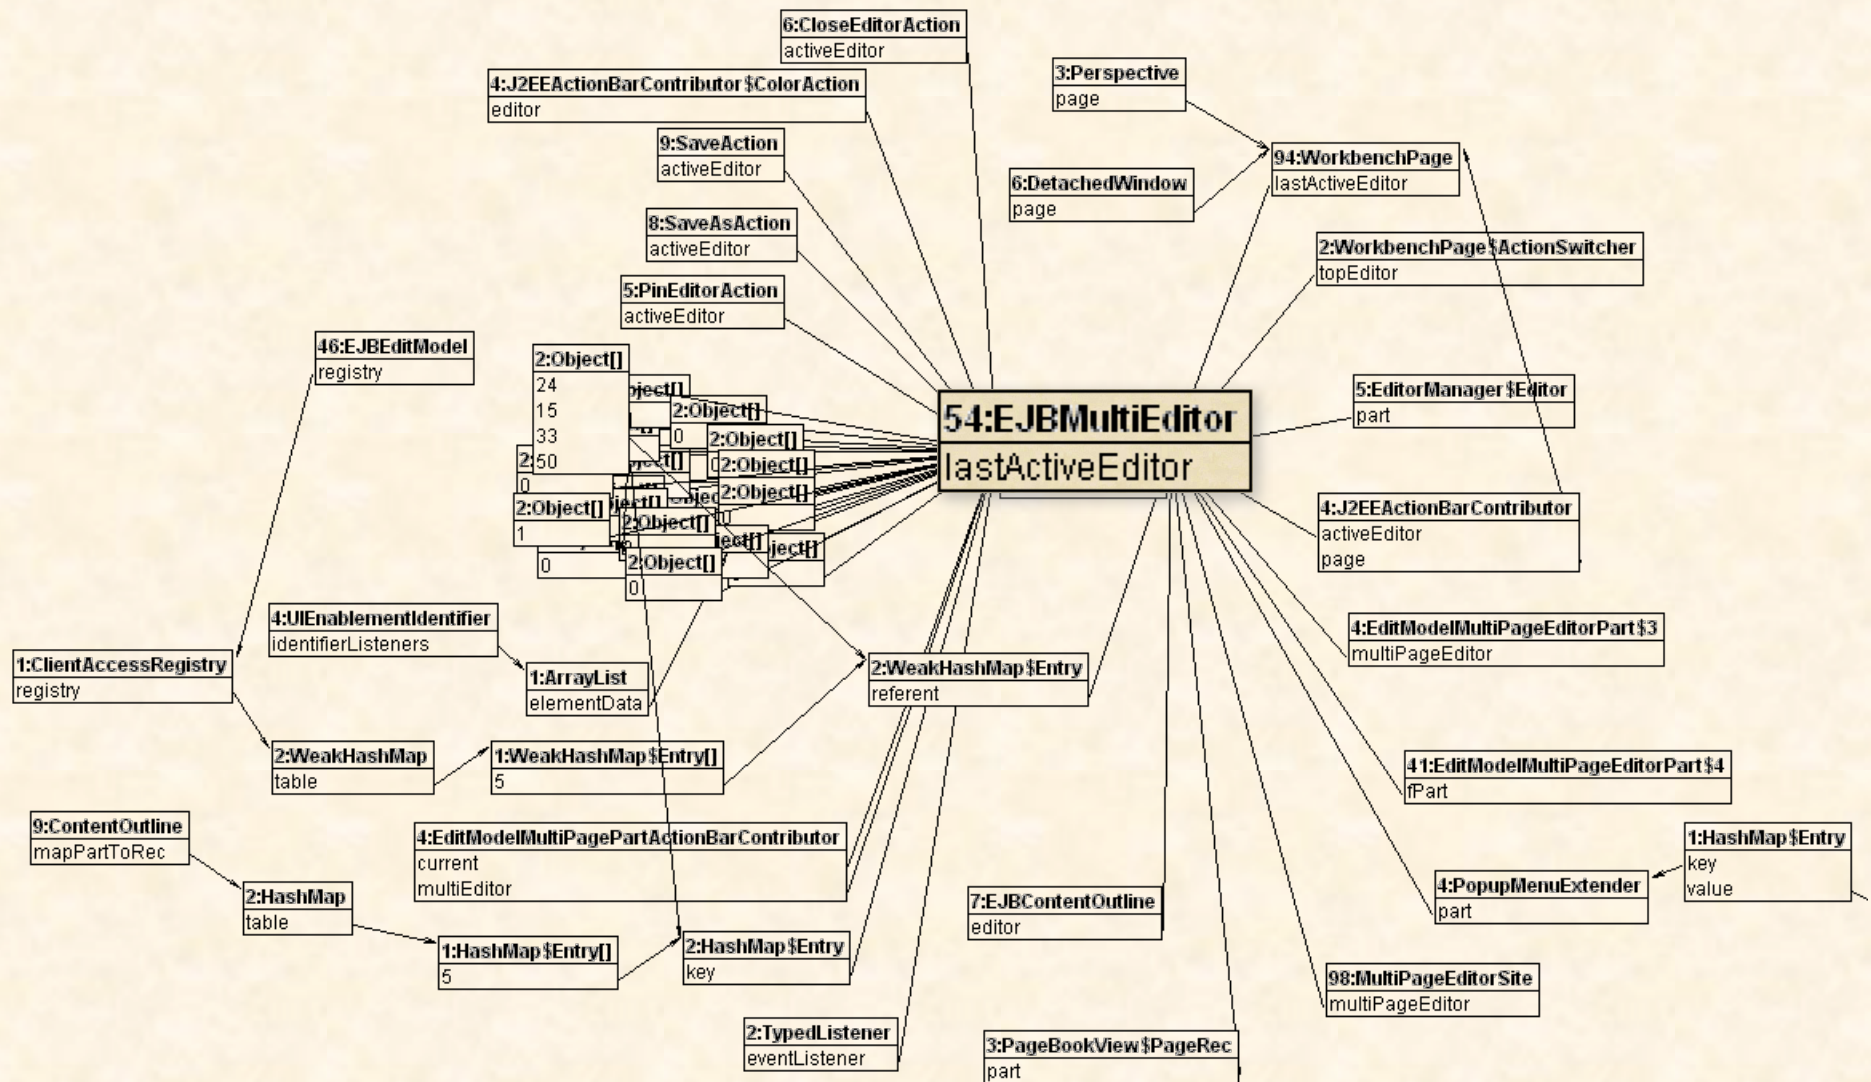

-- Roland Turner

Eclipse == OS

- Eclipse manages resources:
 - Workspaces, Projects, Programs, Files
 - UI Real Estate, Views, Editors, Menus
 - Version Management, Team Sharing
 - OS resources (File, GDI handles)
 - CPU (Threads, Competition)
 - Memory (Lots of it, GC)

Complexity

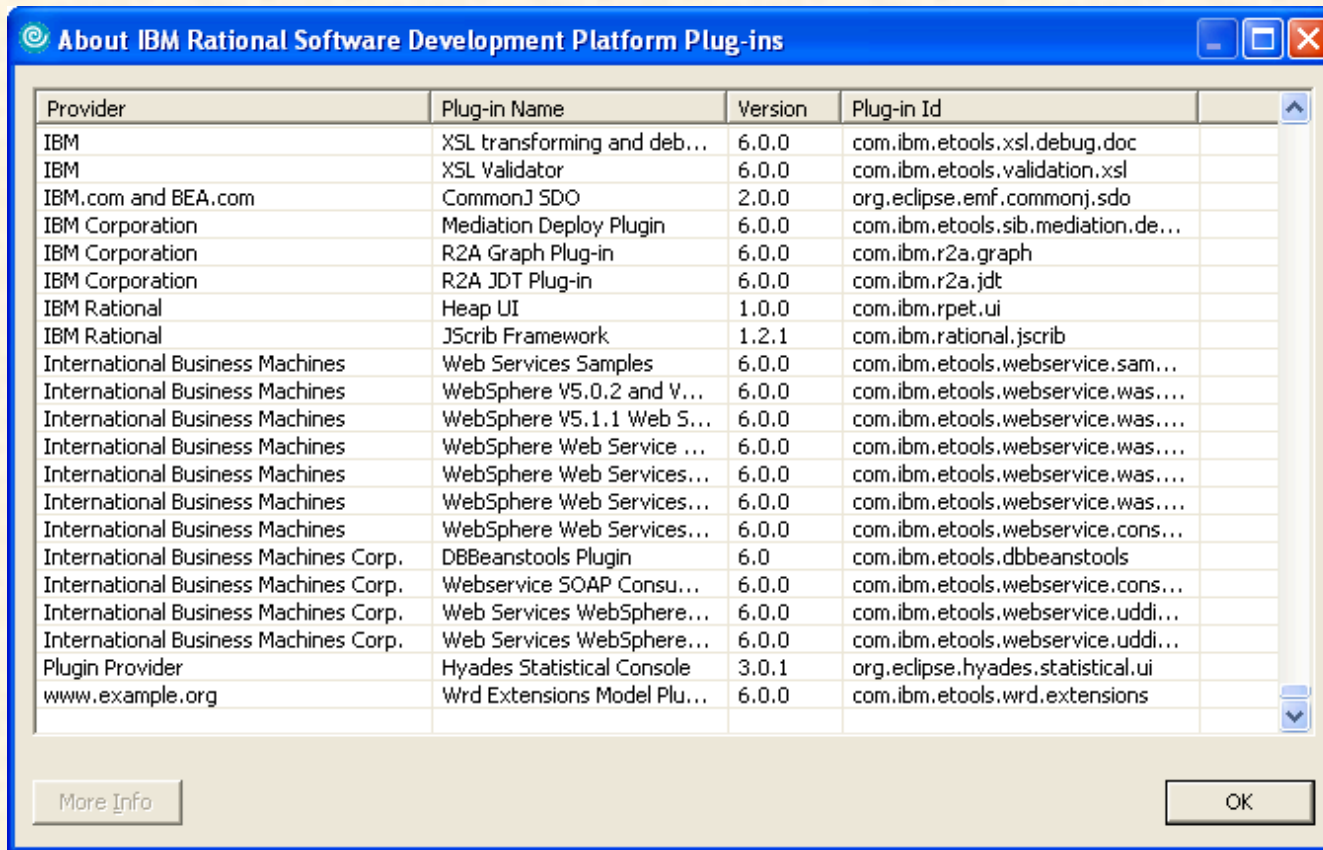

Links to Current Editor

Numerology

- RAD workspace with 2 EJB projects:
 - Build takes 150 million method calls
 - Stacks are 300 calls deep
 - Things run for up to 30 minutes
 - Profiling tools fall over
- Without effort, RSA grows to 600MB
- Some customers need 2.4GB memory

Value is in Composition

About IBM Rational Software Development Platform Plug-ins

Provider	Plug-in Name	Version	Plug-in Id
IBM	XSL transforming and deb...	6.0.0	com.ibm.etools.xsl.debug.doc

More Info OK

“There are two ways of constructing a software design:

1. Make it so simple that there are obviously no deficiencies, or
2. Make it so complicated that there are no obvious deficiencies.”

-- Tony Hoare

“I fear the new object-oriented systems may suffer the fate of LISP, in that they can do many things, but the complexity of the class hierarchies may cause them to collapse under their own weight.”

Bill Joy

Dealing with complexity

“Lloyd's Hypothesis: Everything worth understanding about a complex system, can be understood in terms of how it processes information.”

-- Seth Lloyd

“Today, most software exists, not to solve a problem, but to interface with other software.”

-- I. O. Angell

“The secrets to weight loss are to watch your diet, to exercise, to set reasonable goals, and to measure regularly.”

-- Oprah Winfrey

[this is not a real quote]

“A specification, design, procedure, or test plan that will not fit on one page of 8.5-by-11 inch paper cannot be understood.”

-- Mark Ardis

Design for Performance

- Define and enforce budgets for:
 - – CPU consumption
 - – Memory consumption
- Design for caching (a very important space/time tradeoff)
- Design for persistence life-cycle
- Design for scalability

**Why do we write
such big
software?**

“Zawinski's Law: Every program attempts to expand until it can read mail. Those programs which cannot so expand are replaced by ones which can.”

-- Jamie Zawinski

IBM #1 in 2002 survey:

- Functionality (24%)
- Innovative Solutions (23%)
- Skilled People (18%)
- Flexible Solutions (13%)

“Effective Solution Provider”

What to do?

“Perfection is achieved not when there is nothing more to add, but rather when there is nothing more to take away.”

-- Antoine de Saint-Exupery

Games

Treat our software likes games

1. No manual
2. Need to “unlock” features
3. Real-time based (rendering, etc.)
4. AI built in
5. Maximize use of hardware

Splash Screen Design

“With all the plug-ins, WSAD can take 30 seconds to start up. I stare at the splash screen a lot.”

http://blog.vikdavid.com/2005/05/whats_with_the_.html

Proposal mock-up – not an actual program

Rational. Software Development Platform

Version 6.0 Trial

Our Approach?

“Premature
optimization is the
root of all evil.”

--Donald Knuth

“Never stop testing,
and your products
never stop improving.”

-- David Ogilvy

A Practical Approach

- Fix stuff that has a real impact:
 - – Things that are really slow
 - – Things that are used all the time
 - – Key problem reports
- Pay attention to memory leaks
- Keep an eye out for regressions

“The best way
to have a good
idea is to have
many of them.”
-- Linus Pauling

“Successful visionaries start from where they are, what they have, and what their customers have.”

-- Tom Gilb

Analyzing Performance

The 3 Step Approach

1. Run profiler →
find bottleneck → fix
2. Run profiler →
find bottleneck → fix
3. Run profiler...

Which Profiler?

- Pick one. Any is better than none
- Some choices:
 1. YourKit, JProbe, Purify/Quantify
 2. XRay (just moved to Eclipse TPTP)
 3. `System.out.println`
 4. Eclipse instrumentation

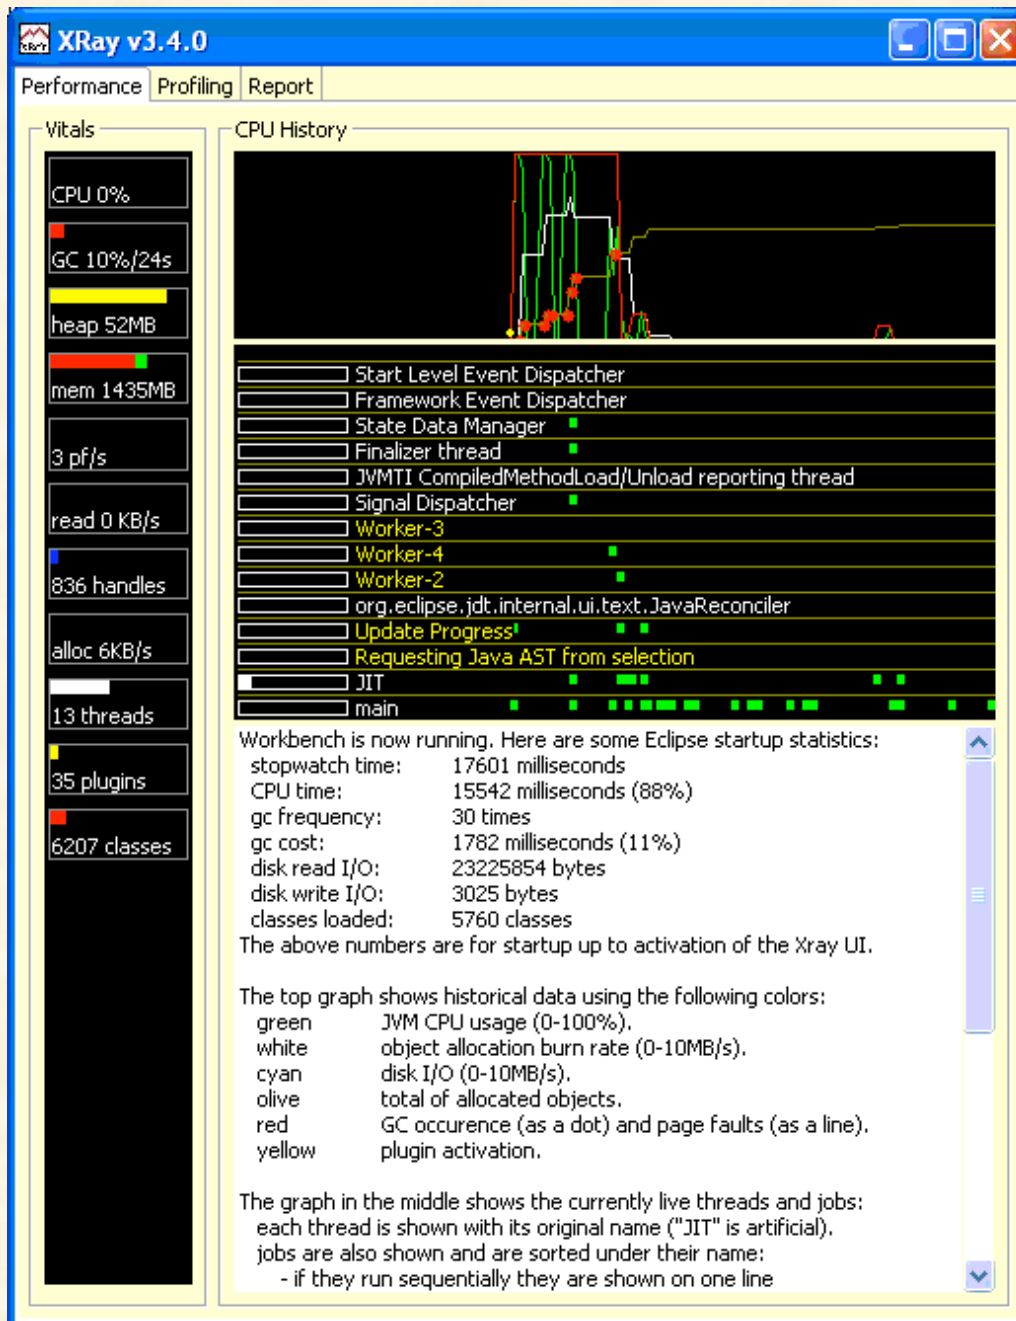

XRay

- Xray is modeled after “Task Manager”
- Minimal overhead

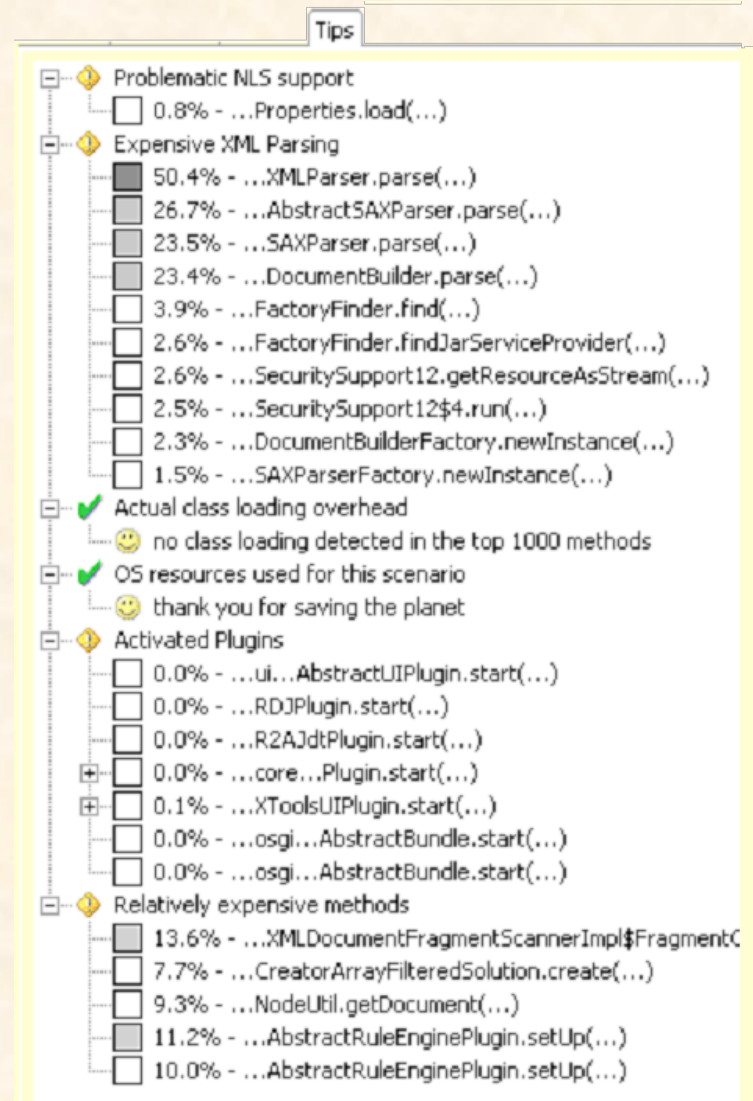

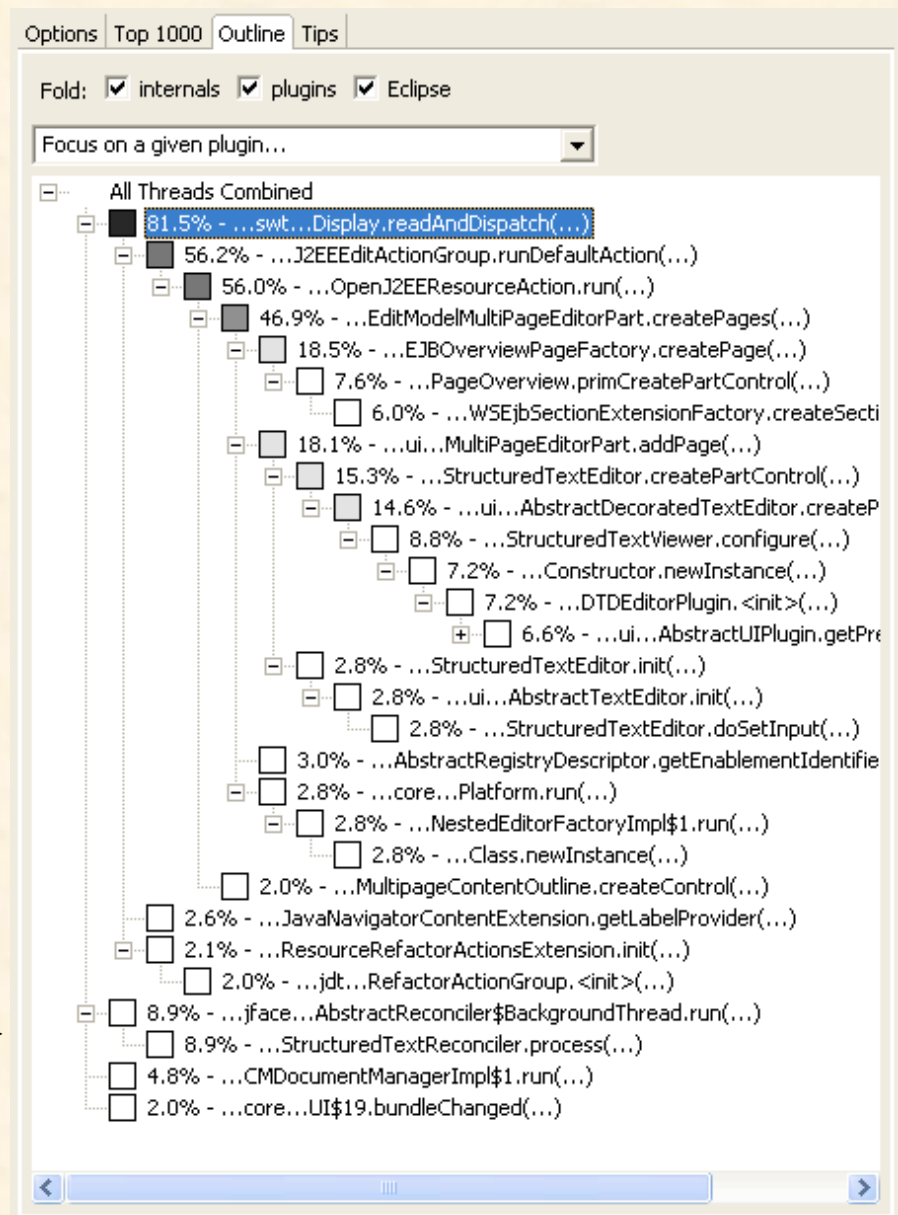

- Use one single graph & human pattern recognition
- Reports with screendumps

XRay

“Simplicity and elegance are unpopular because they require hard work and discipline to achieve and education to be appreciated.”

-- Edsger Dijkstra

Thanks.
